

Removable Automobile HF Radio Mount

John A. Allocca, WB2LUA, August 2005

The primary problem of mounting the HF radio was that it will block the DVD player. Additionally there wasn't anything to mount it to. The solution was to make a mount that rested on the floor and tied with removable Velcro straps.

For the FT-897D Radio, cut a piece of 3/4" pine, 8" x 15". Paint it to match the interior car color. Add foam on the back to prevent squeaks and rattles. Add two rubber feet to the bottom edge to prevent the mount from moving. Mount the radio bracket to the wooden mount.
